pure water systems

Combine - Connect - Enjoy

Water for the Way You Live™

The Linis™ Water Hub™ is a centrally located water purification system that can feed purified water to multiple Water Stations™, ice machines, coffee makers and virtually any other dispensing device. Water Hubs™ can be configured with an endless combination of filters, reverse osmosis membranes, pumps, and ports to meet any drinking water need. In addition to greater flexibility, the Linis™ Water Hub™ approach provides a high level of efficiency by reducing the number of filter sets and drain lines that must be installed and maintained in any environment that requires multiple water dispense locations.

Combine - Connect - Enjoy

Combine

Combine filter and membrane stages and add pumps, ports, meters and tanks to fit your specific water purification needs.

Filtration Options:

- Sediment
- Carbon
- 1-Micron Carbon Block
- Carbon Phosphate
- Ion Exchange
- DI Resin
- 200/400/600 GPD RO Capacity
